Ingredient explanations:

Ginkgo biloba leaf extract. Research shows this potent antioxidant helps improve blood flow. Whether or not blood flow changes anything about cellulite is unknown.

Lactic acid. An alpha hydroxy acid extracted from milk skin cells together. Gently exfoliates the skin's surface for a longer lasting tan and smoother color.

Shea butter. A plant lipid that is used as an emollient in cosmetics. A natural super moisturizer without a greasy feel.

Aloe Barbadensis. A natural skin soother.

Glycerin. It is present in all natural lipids (fats), whether animal or vegetable. Glycerin shores up the skin's natural protection by filling in the area known as the intercellular matrix and by attracting just the right amount of water to maintain the skin's homeostasis. There is also research indicating that the presence of glycerin in the intercellular layer helps other skin lipids do their jobs better.

Green tea. Significant amounts of research have established that green tea delivers many intriguing health benefits. Dozens of studies point to tea's potent antioxidant as well as anticarcinogenic properties. The *Journal of Photochemistry and Photobiology* (December 31, 2001) stated that the polyphenols "are the active ingredients in green tea and possess antioxidant, anti-inflammatory and anticarcinogenic properties. Green Tea is also a definitely potent antioxidant."
